

Electronic Result Delivery

Connect to BayCare for Your Patient Results

Result Delivery, via the BayCare Health Information Exchange (HIE), allows electronic delivery of:

- Lab results, including microbiology and pathology
- Radiology results
- Hospital transcription

Delivery is in real time and allows for customizable delivery per practice preference, based on patient type and/or provider role. Physicians can receive patient results in one of three ways:

- **Folder drop:** Clinical results are electronically delivered as a .pdf file to a specific computer or server at the practice. The practice staff can manage files by printing or attaching to a patient's chart in their EMR. There's no cost associated with this option.
- **iNexx iNbox:** Clinical results are electronically delivered to a host computer or server at the practice. An administrative user at the practice can then give the staff access to view and/or print results via the iNexx iNbox web-based application. There's no cost associated with this option.
- **Direct EMR integration:** Clinical results are electronically delivered directly into the practice's EMR in HL7 format. This option requires the practice to contract with their vendor for an interface configuration project that includes build out and testing. BayCare will subsidize up to \$5,000 toward the implementation of an interface. All ongoing maintenance costs associated with the practice's EMR vendor are the responsibility of the practice.

To register for BayCare Result Delivery

- Call the BayCare Information Services (IS) Help Desk at (727) 467-4700 and request a ticket for the HIE team.
- Email the Health Information Exchange team directly: hie@baycare.org
